

Designing | Cutting | Forming | Fabricating

**High quality sheet
metal work solutions**

**Meeting your exact
project specifications**

We have a history of excellent results, providing precision sheet metal, light fabrications and assemblies for safety-critical and highly demanding applications across several industrial sectors, including the Ministry of Defence, police, electronics, rail, and medical and healthcare with exceptional engineering solutions.

Welcome to **MPL Fabrications**

Precision Sheet Metal Work & Light Fabrications

With a wide range of services available, we are a single point of contact and can manage your project from initial concept to delivery. At MPL Fabrications, we are committed to delivering excellence every step of the way.

About MPL Fabrications

At MPL Fabrications, we provide engineering solutions that meet your exact requirements. Using our knowledge of metals and processes, we focus on quality and reliability, making our products ideal for safety-critical and other highly demanding applications.

Our quality precision sheet metal work and light fabrications services include:

- Welding
- Sheet Metal Work
- Prototyping
- Powder Coating
- Plasma Cutting
- Batch Work

We look to find the most cost-effective solution for all our clients, from one-off prototypes to small or large batch work or even just a one-off welding repair.

Based in Coventry, we deliver all over the UK and Ireland and are a one-stop shop for all your fabrication solutions.

What our customer's say...

"Having dealt with MPL for several years here at A&A, we know that the quality and service from MPL are second to none.

They make our job easier with the products being of such a high quality that we never have any complaints from the in-house assembly team and our own valued customers.

Having visited the site recently and seeing the day-to-day running of the company from the start to finish of the product, it's a real credit to Kevin and his team for being so good at what they do.

Customer services are excellent with quotes and queries, and their own fleet of vehicles means that all our deliveries arrive in excellent condition and on time.

If all of our suppliers were this good, it would make our supply chain life far easier. Thanks, MPL."

Nick Forbes | Supply Chain Manager | A&A

Our services

Prototyping

Our engineers work closely with our customers engineering teams to create prototypes including rapid prototypes as part of our comprehensive range of bespoke solutions.

Plasma Cutting

We offer a range of plasma-cutting techniques. We will ensure a first-class outcome, whether made from aluminium, mild steel or stainless steel. Plasma cutting also ensures repeatability.

Sheet Metal Work

Our highly skilled engineers will deliver time-critical jobs without forfeiting on quality or precision. We are committed to delivering excellence every step of the way.

Specialist Welding

Our specialised welding processes are delivered as part of a wider project or as a stand-alone service. We work with materials as varied as stainless steel, aluminium and mild steel.

Powder Coating

Powder coating is a type of metal finishing that is designed to offer long lasting protection to the metal as well as enhance its look. Your product must perform in its intended environment.

Batch Work

Some items are produced as one-off pieces, and others are manufactured in batches of several thousand at a time. We have the capability to produce large batch runs of parts.
